DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-20 of U.S. Patent No. 6,692,130 in view of Lee (KR 2003047154A).

Claims 1-20 of U. S. Patent No. 6,692,130 disclose a solar powered heating and cooling system for a vehicle same as claimed except for the power controller with thermostat and clock/timer. Lee teaches a control device of air conditioner for vehicle comprising a power controller with temperature sensing unit for detecting the air temperature in the vehicle and a timer 90 coupled to the power controller 60 to open/shut the power at predetermined time same as claimed. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide heating and cooling system of claims 1-20 of U. S. Patent No. 6,692,130 with thermostat for sensing the temperature of air in the vehicle and a clock/timer for activate/deactivate the power controller at predetermined time as taught by Lee in order to improve the vehicle heating/cooling efficiency.
